**David Morrison, Matthew Kieran, Michael Svennevig : Media Values: Intimate Transgressions in a Changing Moral and Cultural Landscape** before purchasing it in order to gage whether or not it would be worth my time, and all praised Media Values: Intimate Transgressions in a Changing Moral and Cultural Landscape:

Media Values' provides a major empirical investigation into the moral performance of the media. Based on 22 focus groups, three nationally representative questionnaire surveys and interviews with senior media personnel and regulators, this book charts the changing position of the media as a moral voice representing ways in which we live. A central theme of the study is how television has lost moral authority to pronounce on the way we should live and instead has increasingly reflected, and given visibility to, the values and norms of a variety of social groups. The book

examines not just the lack of moral certainty that has overtaken television, but the lack of moral certainty of the audience in discussing social, moral and political issues. Particular attention is also given to the whole question of privacy in modern society and the performance of the media in intruding into private performances.

ldquo;There are great riches here: from the interviews with senior media executives . . . to the discussion of popular television culture's celebration of celebrity.rdqo;
